

Signalpet x Provet Integration Setup guide

Automatically push SignalPET reports into your Provet patient record

The SignalPET – Provet API integration allows SignalPET reports to be automatically pushed directly into the patient page in Provet. This helps keep all diagnostic insights centralized in one place, reduces manual uploads, and ensures your team can easily access reports within the patient's medical record.

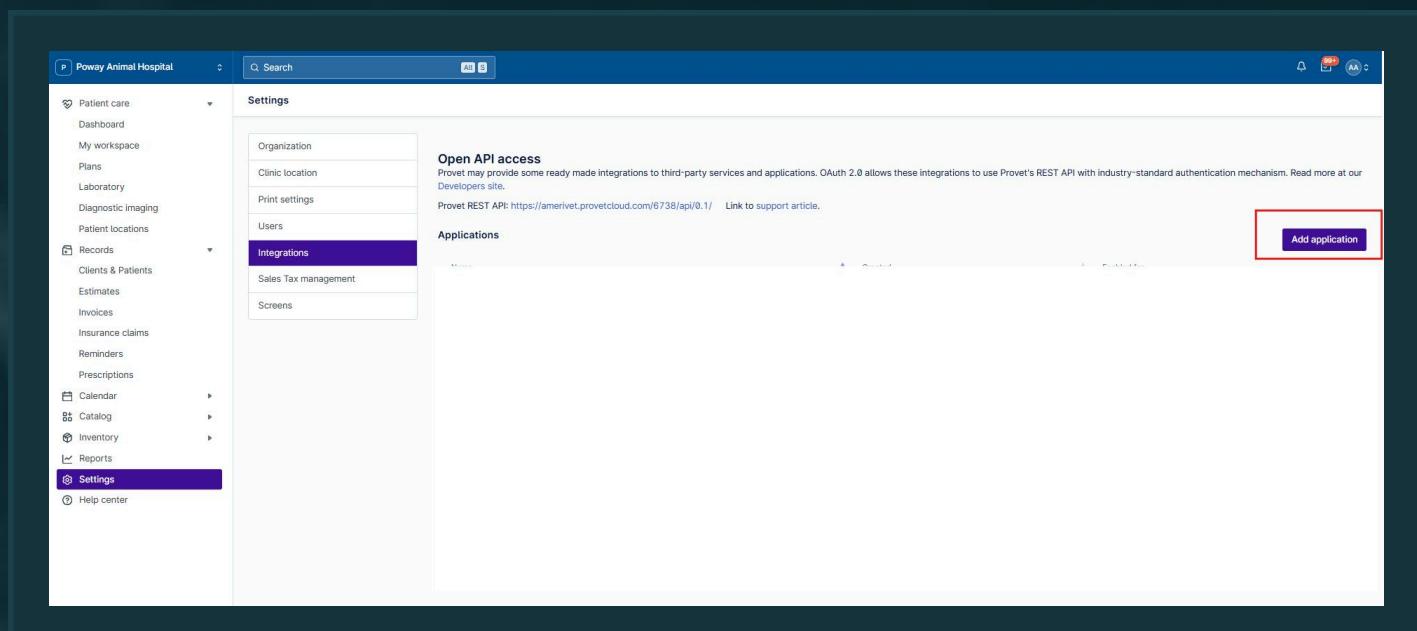

Choose which reports are sent to Provet

Veterinarians can control which types of SignalPET reports are included in the integration. You can select the report types that best fit your clinic's workflow, ensuring only relevant reports are automatically added to the Provet patient page.

How to enable the integration in Provet

Enabling the SignalPET integration takes just a few clicks (screenshots from Provet below):

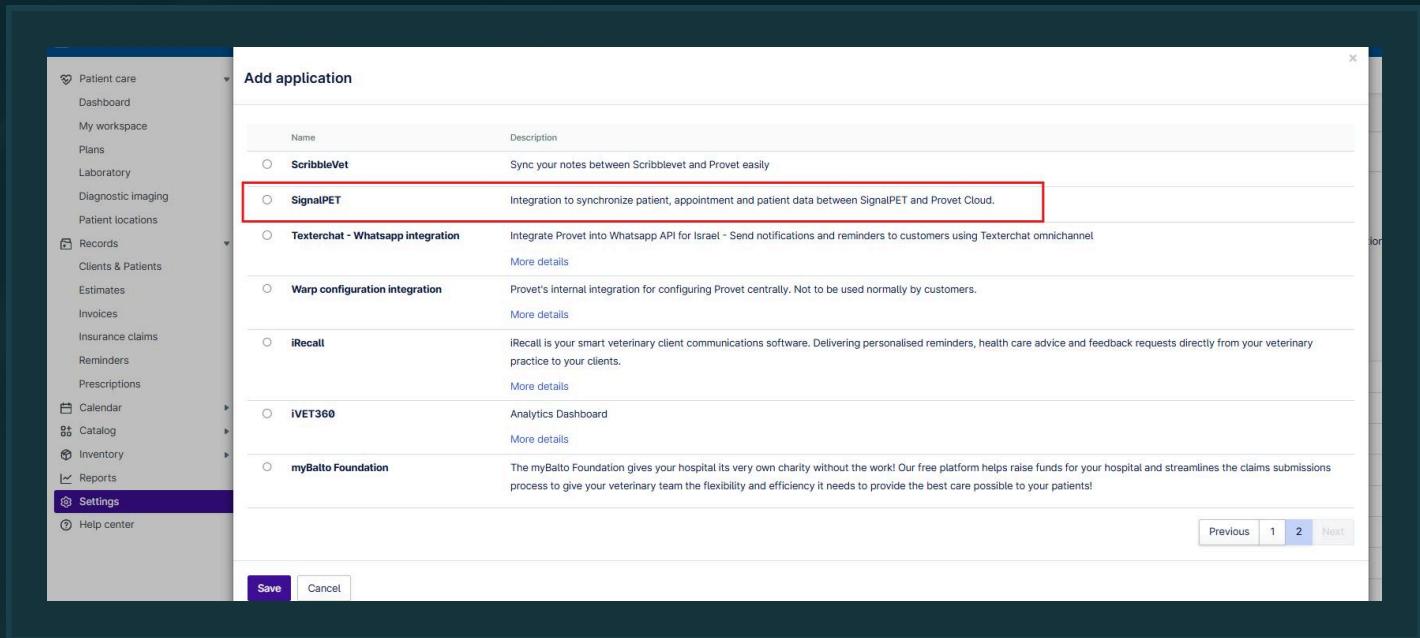

1. In Provet, go to Settings
2. Navigate to Integration
3. Click Add Application

The screenshot shows the Provet software interface. The top navigation bar includes a logo, a search bar, and various icons. The left sidebar has a 'Patient care' section with 'Dashboard', 'My workspace', 'Plans', 'Laboratory', 'Diagnostic imaging', 'Patient locations', and 'Records' (sub-options: 'Clients & Patients', 'Estimates', 'Invoices', 'Insurance claims', 'Reminders', 'Prescriptions'). Below these are 'Calendar', 'Catalog', 'Inventory', and 'Reports'. The 'Settings' section is currently selected and expanded, showing 'Organization', 'Clinic location', 'Print settings', 'Users', and 'Integrations'. The 'Integrations' section is also expanded, showing 'Sales Tax management' and 'Screens'. At the bottom of the 'Integrations' list is a blue 'Add application' button. The main content area has a heading 'Open API access' with a sub-section 'Applications' and a 'Link to support article'.

4. Select the SignalPET application

5. Click Save

The screenshot shows a 'Add application' dialog box. On the left is a sidebar with various 'Patient care' and 'Settings' options. The 'Settings' option is currently selected. The main area lists several integration options with their names and descriptions. The 'SignalPET' option is highlighted with a red box. At the bottom of the dialog are 'Save' and 'Cancel' buttons.

Name	Description
ScribbleVet	Sync your notes between Scribblevet and Provet easily
SignalPET	Integration to synchronize patient, appointment and patient data between SignalPET and Provet Cloud.
Texterchat - Whatsapp integration	Integrate Provet into Whatsapp API for Israel - Send notifications and reminders to customers using Texterchat omnichannel

iRecall	iRecall is your smart veterinary client communications software. Delivering personalised reminders, health care advice and feedback requests directly from your veterinary practice to your clients.
iVET360	Analytics Dashboard
myBalto Foundation	The myBalto Foundation gives your hospital its very own charity without the work! Our free platform helps raise funds for your hospital and streamlines the claims submissions process to give your veterinary team the flexibility and efficiency it needs to provide the best care possible to your patients!

What happens next?

Choose which reports are sent to Provet.

After the application is added, no additional setup is required from your side.

SignalPET will use the securely shared credentials to complete the integration setup for your account.

Once enabled:

- SignalPET reports will be pushed directly into the relevant Provet patient page
- Your selected report types will appear automatically
- Your workflow remains uninterrupted, with no manual uploads needed

If you have any questions or would like help choosing which report types to enable, the SignalPET team is happy to assist.
